BOLILE SEZONULUI RECE

Este cunoscut faptul ca vremea si schimbarile de temperatura influenteaza organismul uman. Principalii factori meteorologici sunt : umiditatea aerului, curentii de aer, presiunea atmosferica si radiatiile. Acestia produc modificari ale mediului la care organismul se adapteaza prin diverse procese fiziologice, dar uneori determina simptome sau agravarea unor boli.

Ce se poate intampla in sezonul rece ?
