Rezistența la antimicrobiene (RAM) continuă să amenințe eficiența tratamentelor împotriva infecțiilor cauzate de bacterii, paraziți, viruși și fungi. În particular, rezistența la antibiotice (RAB) privește bacteriile și unele specii de fungi, constituind componentul dominant al RAM. În contextul ZEIA, RAM va trimite aproape totdeauna la RAB.

Ca ilustrare a gravității fenomenului, în 2016, 490 000 persoane au dezvoltat la nivel global forme de tuberculoze (TB) multi-rezistente la medicația uzuală, iar RAM este complice combaterea HIV și a malariei.

Costul grijii medicale pentru pacienții infectați cu microbi rezistenți este semnificativ mai ridicat prin durata mai lungă a bolii, testările suplimentare și recurgerea la medicamente mai scumpe.

Sporirea prudentei utilizarea antibioticelor pentru a combate rezistența antimicrobiană (RAM) înamic major al sănătății publice mondiale este înaintea Zilei Europene de Informare despre Antibiotice (ZEIA), coordonată din 2008 ECDC în fiecare 18 noiembrie.
