RO;">Este cunoscut faptul ca vremea si schimbarile de temperatura influenteaza organismul  
uman. Principalii factori meteorologici sunt : umiditatea aerului, curentii de aer, presiunea  
atmosferica si radiatiile. Acestia produc modificari ale mediului la care organismul se adapteaza  
prin diverse procese fiziologice, dar uneori determina simptome sau agravarea unor  
boli.</span></p> <p><span style="color: #000000; font-family: Times New Roman; font-size:

#000000;"> <br /> Gripa face parte dintr-o categorie mai mare de boli virale respiratorii. Astfel,  
exista o serie de virusuri care circula in aceeasi perioada a anului, dau simptomatologie  
asemanatoare gripei dar se deosebesc de aceasta prin evolutia mai usoara. <br /> Puteti  
recunoaste o viroza respiratorie datorata altor tipuri de virusuri decat virusurile gripale dupa  
debutul mai lent al bolii (incepe usor cu usturimi in gat, nas infundat, dureri de cap) cat si dupa  
evolutia mai usoara a bolii. <br /> Gripa se transmite usor de la om la om datorita conditiilor  
favorizante cum ar fi aglomerarile urbane, colectivitatile de copii si adolescenti.<br /> <br />
